The following packages were automatically installed and are no longer required:
    bridge-utils linux-headers-5.8.0-55-generic linux-hwe-5.8-headers-5.8.0-55
    linux-modules.extra-5.8.0-55-generic linux-modules-5.8.0-55-generic
    linux-modules-extra-5.8.0-55-generic ubuntu-fan

Use 'sudo apt autoremove' to remove them.

The following additional packages will be installed:
    docker-ce-rootless-extras docker-scan-plugin slirp4netns

Suggested packages:
    aufs-tools cgroupfs-mount | cgroup-lite

The following packages will be REMOVED:
    containerd docker.io runc

The following Packages will be installed:
    containerd.io docker-ce docker-ce-cli docker-ce-rootless-extras
    docker-scan-plugin slirp4netns

ubuntu@ubuntu-HP-Laptop-15s-du3xxx:~$ sudo docker run hello-world
Hello from Docker!
This message shows that your installation appears to be working correctly.
To generate this message, Docker took the following steps:
1. The Docker client contacted the Docker daemon.
2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
    (amd64)
3. The Docker daemon created a new container from that image which runs the
    executable that produces the output you are currently reading.
 4. The Docker daemon streamed that output to the Docker client, which sent it
    to your terminal.
To try something more ambitious, you can run an Ubuntu container with:
$ docker run -it ubuntu bash
Share images, automate workflows, and more with a free Docker ID:
https://hub.docker.com/
